

CREATE. CONNECT. CONVERT.

Salesperson training

Who we are. What we build. How each module works. How we price:
13% of the annual salary for that role, plus a monthly retainer sized to
the project.

Do not quote until you can name the job the module replaces and how big the project is.

HOW TO USE THIS HANDBOOK

Learn the company. Then the modules. Then the two-part price.

- | | |
|----|--|
| 01 | Who we are
Founders, philosophy, how we think. |
| 02 | What we sell
Business Operating Systems, websites, applications. |
| 03 | How we price
13% module fee + monthly retainer sized to the project. |
| 04 | The modules
What is inside each, and how work actually flows. |
| 05 | How you sell
Discovery, language, checklist. |

Public line: Custom Solutions. Custom Pricing. The 13% formula and retainer logic are for conversations and proposals — not website menu prices, ads, or AI / front-desk replies.

WHO WE ARE

We're building the systems behind modern businesses.

Onyx Web Systems is a technology partner building Business Operating Systems, custom applications, and premium web experiences. Tagline: **CREATE. CONNECT. CONVERT.**

Founded on **16 November 2025** by **Sihle Nathi Simelane** while studying Computer Science at Emeris. The company began with websites, then grew into the systems behind businesses.

Lihle Simelane joined to grow the business — relationships, client needs, partnerships. Sihle builds the technology. Lihle grows the company.

Don't just build what a business needs today. Build what it needs to become tomorrow.

Sihle Nathi Simelane

HOW WE THINK

CREATE. CONNECT. CONVERT.

Three words define how we approach technology. This isn't just our tagline. It's how we think — and how you sell.

CREATE	We build digital experiences, applications, and systems that solve real business problems.
--------	--

CONNECT	We connect people, processes, data, and technology so the different parts of a business can work together.
---------	--

CONVERT	We turn complexity into efficiency, opportunities into customers, and systems into growth.
---------	--

The Onyx standard: Simple. Intelligent. Connected. Scalable. Human.
Automation should empower people, not remove judgment where it matters.

DISCOVERY

We don't start with technology. We start with the business.

If you cannot answer these, you are not ready to quote.

How do leads enter?	How are customers managed?
Where is time being wasted?	What tasks are repetitive?
Where are teams losing information?	What systems are disconnected?
What could be automated?	What could be improved?

How we work with a client

1. Discovery — understand the business
2. Strategy — identify opportunities
3. Architecture — map workflows and technology
4. Design — design the experience
5. Development — build the system
6. Testing — test real workflows
7. Launch — deploy
8. Optimization — keep improving

After a project request: review → assessment → 30-minute consultation → proposal → build. Booking does not create a delivery contract. Send people to onyxwebsystems.co.za/book.

THREE LANES

Pick a lane – or combine them into a complete operating system.

01

Business Operating Systems

Connected modules that run sales, customers, finance, people, operations, and reporting as one system. We replace fragmented tools and repetitive work.

02

Websites

Premium sites that carry a brand and convert. Proof: Thrift Rotate (Pretoria streetwear) and about.secnightlife.com.

03

Applications

Custom web and mobile software shaped around how they actually operate. Proof: SEC Nightlife — events, tables, menus, tickets, hiring, payments.

Your job is not to sell “a website.” Find where people, time, and money are leaking. Sell the system that replaces that leak.

TWO NUMBERS

Every BOS deal has two layers. Never one.

LAYER	WHAT IT IS	HOW YOU CALCULATE IT
1. Module fee (13%)	Price to put that function into the operating system	13% of what that role would cost as an employee for one year
2. Monthly retainer	Ongoing run, improve, support, keep the system alive	Sized to how big the project is — not a flat fee, and not 13% again

Part 1 – The 13% module fee

1. Name the job the module is doing.
2. Get the annual salary for that seat.
3. Charge 13% of that annual amount.

Charge = annual salary of that role × 0.13

SALES MODULE $R240,000 \times 0.13 = R31,200$	FINANCE MODULE $R180,000 \times 0.13 = R23,400$
---	---

Several modules: calculate 13% per module, then add. A full operating system is a stack, not a mystery lump sum.

“Instead of hiring another person to run this all year, we put that function in the system. The module fee is 13% of what that seat would cost you annually. Then there is a monthly retainer, sized to the size of the build.”

MONTHLY RETAINER

Sized to how big the project is.

The 13% is not the whole relationship. The retainer is not 13% again. It is not the same for every client.

What it pays for

- Keeping the system live
- Improving workflows as the business changes
- Support when staff get stuck
- Channel monitoring (WhatsApp, web, Instagram — depending on the build)
- Knowledge updates and small scope that is not a new module
- Reporting the client actually uses

SIGNAL	SMALLER	BIGGER
Modules	One module	Several connected modules
Team	1-10 people	11-50 / 51-200 / 200+
Channels	One form	Phone, WhatsApp, Instagram, Facebook, email
Workflows	One simple path	Approvals, payments, multi-location
Custom	Standard module	Custom agents and specialised systems

Small → lower monthly. Mid (two or three modules, 11-50 staff, WhatsApp + web) → mid. Large (full OS, many channels, custom) → highest. Until leadership gives exact bands, size the project correctly. Do not invent a rand amount on the call.

Websites and apps are scoped, then quoted. Do not apply 13% of a designer's salary unless leadership says so.

ONE BUSINESS. ONE CONNECTED SYSTEM.

Seven modules.

When you sell a module, always name the job it replaces (for the 13%), what is inside, and how work flows.

#	MODULE	JOB IT REPLACES	INSIDE
01	Sales	Salesperson / sales admin	Capture, qualify, CRM, follow-ups, appointments, pipeline
02	Customer Experience	Receptionist / front desk	Communication, support, onboarding, feedback, workflows
03	Finance	Bookkeeper / finance admin	Invoices, payments, approvals, financial workflows
04	HR	HR admin / office manager	Recruitment, onboarding, employee workflows, documents
05	Office Operations	Office admin / coordinator	Tasks, scheduling, documents, internal admin
06	Reporting & Analytics	Analyst / spreadsheet owner	Dashboards, KPIs, reports, performance
07	Custom	Specialist seat / contractor	Custom workflows, AI agents, integrations

Booking forms may show older labels (Lead Management, Marketing, Follow-Ups, Internal Comms). Map those into the seven modules so you do not sell two names for the same work.

SALES

Turn more opportunities into revenue.

13% job: salesperson, sales admin, or junior closer.

- **Lead capture** — web, WhatsApp, Instagram, Facebook, forms, walk-ins. One place.
- **Qualification** — need, budget signal, timeline, team size.
- **CRM** — identity, history, notes, stage.
- **Follow-ups** — automatic and human so leads do not go cold.
- **Appointments** — book from the same thread.
- **Pipeline** — first contact to closed.

01 Capture	02 Qualify	03 Follow up	04 Book	05 Convert	06 Report
---------------	---------------	-----------------	------------	---------------	--------------

Lead Management, Follow-Ups, or Sales & CRM on the booking form is this module. Speed-to-lead: the business answers fast, in one system.

Ask: “Who follows up leads today, and what would that person cost for the year?”

CUSTOMER EXPERIENCE

The digital front desk.

13% job: receptionist, front-desk admin, or the seat that answers all day.

This is the live Onyx product: Conversations, Calendar, Customers, Appointments, Tickets, Knowledge, Live Activity.

- **Communication** — one inbox: web, WhatsApp, SMS, voice, Instagram, Facebook.
- **Support** — approved knowledge; misses become tickets and a human.
- **Onboarding** — identify, create the record, next step.
- **Feedback** — what customers said, not what staff remember.
- **Workflows** — greet, hours, book, reschedule, remind, escalate. After hours it still captures and books.

1. Customer messages or calls.
2. System identifies them — or creates them.
3. Answers from knowledge, books, or captures the request.
4. Angry / legal / billing / safety / “a person” → handoff.
5. Staff see the same thread. They do not start from zero.

Ask: “Who answers customers all day, on which channels, and what does that seat cost per year?”

FINANCE

Money in. Money out. A clean trail.

13% job: bookkeeper, finance admin, or the owner invoicing at midnight.

- **Invoices** — create, send, paid vs overdue.
- **Payments** — tied to the customer and the job.
- **Approvals** — spend, discount, refund, payout follows a path.
- **Workflows** — quote → invoice → payment → receipt → reminder.
- **Reporting** — in, outstanding, stuck in approval.

Ask: “Who chases invoices today? What would that person cost for a year?”

HR

People in. People through.

13% job: HR admin, office manager, or whoever onboards staff on WhatsApp.

- **Recruitment** — applications, screening, interviews, status.
- **Onboarding** — documents, access, how the company works.
- **Employee workflows** — leave, role changes, repeat HR tasks.
- **Documents** — contracts, IDs, policies on the person.
- **Internal processes** — this company’s rules, not generic HR.

Ask: “Who runs hiring and staff paperwork, and what is that annual salary?”

OFFICE OPERATIONS

The running of the office.

13% job: office admin, operations coordinator, or PA.

- **Tasks** — assigned, tracked, closed.
- **Scheduling** — internal who / where / due. Customer bookings sit in CX.
- **Documents** — SOPs the office needs every day.
- **Internal workflows** — when X happens, do Y.
- **Admin** — repetitive work that still eats a salary.

Booking labels Operations, Internal Comms, Document / Data Processing usually land here. Do not double-charge the same workflow.

Ask: “If you hired an office admin for a year, what would you pay them?”

REPORTING & ANALYTICS

See the business. Don't guess.

13% job: analyst, ops spreadsheet owner, or Sunday CSV exports.

- **Dashboards, KPIs, reports, performance, intelligence** — it reads the other modules. Do not sell a dashboard of nothing.

Ask: “Who builds the reports today? What would that seat cost per year?”

CUSTOM

The thing no off-the-shelf tool has got right.

13% job: the specialist seat or contractor they keep hiring.

- **Custom workflows** — nightlife, HVAC dispatch, drop + WhatsApp sales.
- **AI agents** — front desk, qualifier, follow-up — scoped, not a buzzword.
- **Integrations** — official APIs only.
- **Specialized systems** — a module named for them.

Custom almost always means a bigger retainer.

Ask: “Show me the workflow no tool has got right. Who runs it today?”

How they connect

CX catches the person → Sales moves the pipeline → Finance takes the money → Ops and HR run the company → Reporting shows if it works → Custom is their industry engine

Start with one module. The upsell is the next module in the same operating system — not a new vendor.

MOTION

Discovery, then the expensive human, then the system.

1. How do leads enter?
2. Who answers, and on which channels?
3. How are customers managed today?
4. Where is time wasted / what is repetitive?
5. Which modules match that waste?
6. For each module: annual salary of that role → 13%.
7. Size the project: modules × team × channels × custom → retainer.
8. Book the 30-minute consultation. Proposal after scope.

The motion

- | | |
|----|--|
| 01 | Open — “Walk me through how a lead becomes a paying customer today.” |
| 02 | Find the expensive human — every BOS sale lands on a role. |
| 03 | Show the operating system — one system, connected modules. |
| 04 | Book /book — lane, modules, timeline, team size, budget signal. |
| 05 | Quote after scope — 13% per module + retainer from size. Web/app separate. |

WORDS

Sound like Onyx. Never like a package menu.

USE	AVOID
We build the systems behind modern businesses.	Our packages start at...
We don't start with technology. We start with the business.	The AI will give you a price.
Businesses don't need more tools. They need better systems.	Fake discounts, dates, or unscope features
Custom solutions. Custom pricing.	Calling Onyx "just a web design company"
13% of that seat for the year, plus a retainer sized to the project.	Publishing 13% or retainers on the website or ads

Never

- Quote 13% and forget the retainer — or a retainer with no module fee
- Use the same monthly for a one-module shop and a full operating system
- Invent prices, discounts, timelines, or features
- Let the front desk / AI invent numbers

BEFORE YOU QUOTE

Checklist. Proof. What not to invent.

- Module(s) named
- Role named per module
- Annual salary (or agreed estimate) per role
- 13% calculated per module
- Project size scored (team, channels, modules, custom)
- Retainer band confirmed with leadership until official bands exist
- Website / app quoted separately if needed
- Consultation booked

Know these cold

onyxwebsystems.co.za · /services · /about · /book · Thrift Rotate · SEC Nightlife · Dashboard
Conversations · @onyxwebsystems

Do not invent these three

1. Whether 13% is once-off, year-one, or charged again each year
2. The actual retainer bands in rand
3. Whether “salary” means basic pay or cost to company
